PRODUCT INFORMATION AND SERVICE POLICIES

Livestream commerce reference | Edition 1

Eight product guides and two market policy references. The Markdown publication is the source of record; this PDF is its human-readable rendition.

Fictional training corpus - not a retailer publication. Effective 09 October 2026. Published by Live Host Lab for integration and source-grounding validation.

CloudStep Runner | Product and care guide

cloudstep-care | Version 1 | Markets: DE, FR

Effective 09 October 2026 | Source language: English | Fictional training information

Product reference: PRODUCT-CLOUDSTEP-RUNNER

Construction and use

CloudStep Runner has a recycled mesh upper and rubber outsole. It is a road-running style for everyday use on maintained surfaces. The material description is not a waterproof rating or a guarantee of comfort for every wearer.

Cleaning and drying

Do not machine wash or tumble dry this shoe. Remove loose dirt with a soft brush, then spot clean the upper with a damp cloth and mild soap. Do not soak the assembled shoe. Air dry at room temperature away from radiators and direct heat.

Insole and fit

The insoles are removable. Remove them before cleaning the inside and allow them to dry separately. Compatibility with any particular orthotic has not been assessed. Try both shoes with the socks intended for use; a removable insole alone does not establish suitability for a foot condition.

Size selection and limits

Sizes in the product catalogue use the EU system. A size label does not establish foot width or fit. No model-specific internal-length or width measurement is published in this guide. Current available sizes, colors and stock must be checked in the selling market; this document contains no availability promise.

NightPace Runner | Use and maintenance

nightpace-use | Version 1 | Markets: DE, FR

Effective 09 October 2026 | Source language: English | Fictional training information

Product reference: PRODUCT-NIGHTPACE-RUNNER

Intended surfaces

NightPace Runner uses a recycled mesh upper and rubber sole. It is intended for road and everyday walking use. The product name does not establish reflective performance or visibility certification; no such certification is published in this guide.

Cleaning

Brush off dry surface dirt. Clean small marks with diluted mild soap on a soft cloth, then wipe off residue with a second damp cloth. Do not use bleach or solvents. Machine washing is not an approved cleaning method for this model.

Rain and traction

No waterproof construction or measured wet-slip rating is declared. If the upper gets wet, allow it to dry fully before the next wear. A rubber outsole alone is insufficient to promise grip on wet tiles, ice or oil-contaminated floors.

Sizing and product information

Use the EU size shown in the catalogue. This guide does not publish a wide-fit designation or a removable-insole specification. Do not substitute another model's insole or fit information for NightPace. Price, available colors and size stock come from the current market listing.

MetroFlex Runner | Textile care guide

metroflex-care | Version 1 | Markets: DE, FR

Effective 09 October 2026 | Source language: English | Fictional training information

Product reference: PRODUCT-METROFLEX-RUNNER

Product construction

MetroFlex Runner has a textile upper and rubber sole. It is listed as a running style. Flexibility is a design description; the guide does not provide a quantified flexibility test or an injury-prevention claim.

Upper cleaning

Hand clean surface marks with a soft cloth and a small amount of mild soap. Test the cleaning solution on an inconspicuous area first. Do not immerse the assembled shoe or put it in a washing machine. Avoid stiff brushes on the textile upper.

Drying and storage

After cleaning, reshape the shoe lightly and air dry in a ventilated place. Do not place it on a heater or use a tumble dryer. Store only after it is dry; prolonged storage in a damp gym bag can retain moisture.

Fit questions

No published width measurement or model-specific size-conversion chart is available. A request such as "I am between two sizes" cannot be resolved from the material alone. Compare with the selling market's size guidance and check both feet during indoor try-on; this guide does not authorize a guaranteed fit recommendation.

StreetPro Runner | Everyday footwear guide

streetpro-guide | Version 1 | Markets: DE, FR

Effective 09 October 2026 | Source language: English | Fictional training information

Product reference: PRODUCT-STREETPRO-RUNNER

Product classification

Despite the word Runner in its name, StreetPro Runner is classified as a lifestyle shoe in this catalogue. Its upper is synthetic and its sole is rubber. It is not documented here as a competition running shoe or protective workplace footwear.

Care

Wipe the synthetic upper with a soft damp cloth and allow it to air dry. Avoid abrasive cleaners, bleach and solvent-based stain removers. Do not machine wash. Persistent stains should be assessed before applying a stronger cleaning product.

Use limitations

No slip-resistance certification, electrical protection, waterproof membrane or safety-toe rating is declared. Do not infer suitability for a regulated workplace from the sole material. The guide also does not certify the complete shoe as vegan; a synthetic upper does not describe every adhesive or component.

Color and size

Black and white are catalogue color options. This does not mean every color-size combination is currently offered or in stock in both markets. Use the exact variant record for a black EU 38 request. This guide gives no stock or price guarantee.

AeroKnit Runner | Road use guide

aeroknit-guide | Version 1 | Markets: DE, FR

Effective 09 October 2026 | Source language: English | Fictional training information

Product reference: PRODUCT-AEROKNIT-RUNNER

Construction

The published construction for AeroKnit Runner is a recycled mesh upper with a rubber sole. The name does not override the recorded material specification. It is a running-category style, not evidence of a particular race-distance certification.

Cleaning the mesh

Remove dirt gently with a soft brush. Spot clean mesh panels with a damp cloth and mild soap. Keep rubbing light around joins and decorative panels. Do not soak, machine wash or tumble dry the assembled shoe.

Heat and exposure

Air dry away from direct heat. Avoid leaving wet footwear in a sealed bag. No temperature range, insulation rating or waterproof performance is published, so the guide cannot establish suitability for snow, freezing conditions or prolonged rain.

Unpublished measurements

This guide does not include shoe weight, heel-to-toe drop or internal width. Those measurements must not be borrowed from a similarly named style. Market availability and current offers are held in the catalogue and pricing service.

SwiftArc Runner | Product information

swiftarc-guide | Version 1 | Markets: DE, FR

Effective 09 October 2026 | Source language: English | Fictional training information

Product reference: PRODUCT-SWIFTARC-RUNNER

Construction and intended use

SwiftArc Runner has a textile upper and rubber sole and is classified as a running style. The available specification does not identify a carbon plate or disclose a laboratory energy-return measurement.

Routine care

Use a soft brush for dry dirt and a damp cloth for remaining marks. A mild soap solution may be used sparingly. Do not machine wash or dry with direct heat. Let the upper and lining dry fully before storage.

Laces and replacement parts

Laces may be removed for separate hand cleaning. The shoe should not be soaked while the laces are cleaned. This guide does not list replacement-lace dimensions or offer a spare-parts ordering service; those details require a separate parts source.

Fit and usage questions

There is no published wide-fit designation or guarantee of comfort over a full work shift. Ask for the wearer's intended use only when it would change the available guidance. Do not claim that textile construction alone makes the shoe appropriate for a medical or orthopedic need.

UrbanGlide | Knit upper care

urbanglide-guide | Version 1 | Markets: DE, FR

Effective 09 October 2026 | Source language: English | Fictional training information

Product reference: PRODUCT-URBANGLIDE

Materials

UrbanGlide has an engineered knit upper and foam midsole. The current catalogue classifies it as running footwear. The published material list is not a complete component breakdown and does not establish animal-free construction.

Knit care

Use a soft damp cloth and avoid scrubbing or snagging the knit. Do not use a stiff brush on the upper. Machine washing and tumble drying are not approved. Allow the assembled shoe to air dry without stretching the wet upper.

Wet weather

No waterproof membrane or water-resistance rating is published. Knit appearance is not proof of ventilation performance, and a foam midsole is not proof of traction on wet floors. Use only the performance information specifically stated for this model.

Maintenance limits

The guide does not specify that the insole is removable. Do not pull on a bonded component to test it. Repair suitability and replacement components have not been documented; a damaged shoe needs an appropriate inspection before continued use.

TerraFlow Trail | Product scope and care

terraflow-guide | Version 1 | Markets: DE, FR

Effective 09 October 2026 | Source language: English | Fictional training information

Product reference: PRODUCT-TERRAFLOW-TRAIL

Classification matters

TerraFlow Trail is classified as lifestyle footwear in this synthetic catalogue, despite the word Trail in its name. It has a synthetic upper and rubber sole. No technical trail-running, hiking or protective-footwear certification is declared.

Cleaning after outdoor use

Allow loose mud to dry, then remove it with a soft brush. Wipe remaining marks with a damp cloth and mild soap. Do not machine wash, immerse or expose the shoe to direct drying heat. Let it dry fully before storage.

Performance boundaries

No waterproof rating, quantified lug depth or tested mountain-terrain suitability is published. Do not turn a product name or a rubber-sole description into a guarantee for hiking, ice or slippery rock.

Purchase and return context

Consult the current market listing for available variants and price. Outdoor use can affect eligibility under a voluntary unworn-item return policy; the applicable market policy and the actual condition of the item must be considered. This product guide does not decide an individual return claim.

Germany | Voluntary returns and promotion terms

returns-de | Version 1 | Markets: DE

Effective 09 October 2026 | Source language: English | Fictional training information

Voluntary return window

For purchases in the German storefront, the fixture voluntary return window is 30 days from receipt. The product must remain unworn, with its original labels. This commercial policy summary does not replace applicable statutory rights or decide a defect claim.

Indoor try-on versus outdoor wear

Careful indoor try-on to assess fit is consistent with the unworn-item condition when it leaves the item unworn and with its original labels. Outdoor walking that leaves wear or soiling does not satisfy this voluntary condition. An individual return decision requires inspection; the assistant must not promise approval.

Promotional codes

Only one promotional code may be applied per order under this fixture policy. A publicly shown code does not establish current eligibility for every account or item. Current code status and any price calculation must come from the promotion or quote service, not this document.

Escalation and privacy

For an order-specific defect, missing parcel or refund status, use the private support channel linked from the order account. Do not collect order numbers, addresses or payment details in public livestream comments. No refund timing or return shipping charge is specified in this document.

France | Voluntary returns and promotion terms

returns-fr | Version 1 | Markets: FR

Effective 09 October 2026 | Source language: English | Fictional training information

Voluntary return window

For purchases in the French storefront, the fixture voluntary return window is 30 days from receipt. Items must be unworn and retain their original labels. This commercial offer does not replace applicable statutory rights or establish the outcome of an individual defect claim.

Condition and inspection

The original labels and unworn condition are required together; keeping the labels does not make a worn item eligible. Careful indoor try-on may be compatible with the policy if the item remains unworn. Outdoor wear or damage requires an individual assessment, and approval cannot be promised in a livestream reply.

Discount combinations

The French storefront permits one promotional code per order in this fixture. A German storefront campaign is not automatically a French storefront campaign. Retrieve the current promotion for the selected market, and obtain an indicative quote if a discounted amount is requested.

Private support

Order-specific return approval, delivery incidents and payment questions belong in authenticated private support. The public assistant may explain the published policy, but it cannot inspect an order or authorize a refund. No return-label fee or reimbursement deadline is established here.
