AeroKnit Runner | Road use guide

aeroknit-guide | Version 2 | Applies in: DE, FR
Effective 2026-10-09 | English | Fictional training publication
Product: PRODUCT-AEROKNIT-RUNNER

Construction

The published construction for AeroKnit Runner is a recycled mesh upper with a rubber sole. The name does not override the recorded material specification. It is a running-category style, not evidence of a particular race-distance certification.

Cleaning the mesh

Remove dirt gently with a soft brush. Spot clean mesh panels with a damp cloth and mild soap. Keep rubbing light around joins and decorative panels. Do not soak, machine wash or tumble dry the assembled shoe.

Heat and exposure

Air dry away from direct heat. Avoid leaving wet footwear in a sealed bag. No temperature range, insulation rating or waterproof performance is published, so the guide cannot establish suitability for snow, freezing conditions or prolonged rain.

Unpublished measurements

This guide does not include shoe weight, heel-to-toe drop or internal width. Those measurements must not be borrowed from a similarly named style. Market availability and current offers are held in the catalogue and pricing service.
