Product: PRODUCT-AEROSTREET

Running construction

AeroStreet is a running-category model with a synthetic upper and rubber sole. Black is its catalog color. Street is part of the model name; the product record describes a road-running style rather than a separate lifestyle collection.

Wiping the upper

Remove loose grit first, then wipe the upper with a soft damp cloth. Use mild soap sparingly and remove residue from seams. Do not use solvent cleaners, abrasive pads or machine washing. Avoid immersing the complete shoe.

Drying after rain

Open the lacing area and allow the lining to dry at room temperature. Keep the pair away from hot-air dryers and radiators. The synthetic upper is not, by itself, proof of waterproofing; this guide includes no waterproof test result.

Fit and maintenance limits

Try both shoes with running socks before outdoor use. Check toe room without overtightening the laces. The publication does not specify a replacement mileage, width measurement or material-based guarantee of breathability.
