Walking and commuting

CityBounce is a walking model with a recycled mesh upper and rubber sole. Its navy and white color options are catalog choices, not a statement of stock. No quantitative rebound or energy-return measurement is published for the model despite its name.

Dust and street marks

Brush off dry surface dust before using a damp cloth. Work mild soap gently into marks on the cloth, then remove residue with clean water on a second cloth. Do not machine wash, bleach or soak the complete shoe.

Daily drying routine

After commuting in damp conditions, loosen the laces and allow the pair to dry indoors at room temperature. Keep it away from radiators and avoid stacking a wet pair inside another bag. Storage should start only after the lining feels dry.

Comfort assessment

Try both shoes with the socks you expect to wear on a normal day. Walk indoors and check the heel, toe space and top of the foot. The walking category does not establish comfort for every wearer or for a particular medical condition.
