Product: PRODUCT-MOTIONLITE

Road-running materials

MotionLite is a running shoe with an engineered knit upper and foam midsole. Grey and blue are catalog colors. No measured weight is published; Lite is a model name and does not establish that it is lighter than a named alternative.

Care of knit loops

Handle the upper with a soft cloth rather than a stiff brush. If dirt has dried, loosen it gently before spot cleaning. Avoid pulling at caught loops. Do not cut a loose strand without an assessment of the damaged knit.

Cleaning and drying

Use mild soap on a damp cloth, then blot away residue with a clean cloth. Do not machine wash, soak, wring or tumble dry the shoe. Leave it at room temperature with the laces loosened so the inside can dry.

Before the next run

Check the upper-to-sole join and the condition of the foam before use. A damaged bond needs assessment; drying cannot repair it. The guide provides no prescribed replacement mileage or performance comparison with a different foam compound.
