Running overview

NovaFlex is a road-running model with a recycled mesh upper and rubber sole. Black is its catalog color. The published data does not contain a measured flexibility score, so the name cannot be used for a numeric flexibility comparison.

Mesh cleaning method

Remove dry debris with a soft brush before treating marks. Wipe with a damp cloth and mild soap and remove any residue. Do not machine wash, bleach or soak the complete shoe. Work gently around seams to avoid snagging the mesh.

Drying and storage

Open the lacing area after wet use and dry at room temperature. Avoid heaters and hot-air dryers. Do not put the pair into a closed storage box until the lining is dry, and avoid storing heavy objects on the uppers.

Fit and construction limits

Try both shoes with running socks and assess toe room and heel security indoors. No removable-insole specification, width measurement or orthotic-compatibility assessment is published for this model. Do not transfer those facts from a different running shoe.
