Construction and everyday running

PaceLine combines a recycled mesh upper with a rubber sole and is listed for road running. Black and white are catalog color options. Recycled describes the listed upper material; the record does not state a recycled percentage for the whole shoe.

Caring for light-colored panels

Remove dry grit before wiping the mesh so it is not rubbed into the fabric. Apply a small amount of mild soapy water to a cloth, not directly into the shoe. Clean gently and remove residue. Do not use whitening bleach or machine wash the assembled shoe.

After a wet run

Open the lacing area and leave the shoes in moving air at room temperature. Let the inside dry before the next wear. Avoid radiators, hot-air dryers and prolonged direct heat. Cleaning does not restore worn tread or repair a loose sole bond.

Size and fit information

Use the EU size shown on the product listing as the size identifier, then assess fit on both feet. This publication has no guaranteed true-to-size or wide-fit claim. Live stock, including the chosen color and size, must be checked separately.
