SwiftArc Runner | Product information

swiftarc-guide | Version 2 | Applies in: DE, FR
Effective 2026-10-09 | English | Fictional training publication
Product: PRODUCT-SWIFTARC-RUNNER

Construction and intended use

SwiftArc Runner has a textile upper and rubber sole and is classified as a running style. The available specification does not identify a carbon plate or disclose a laboratory energy-return measurement.

Routine care

Use a soft brush for dry dirt and a damp cloth for remaining marks. A mild soap solution may be used sparingly. Do not machine wash or dry with direct heat. Let the upper and lining dry fully before storage.

Laces and replacement parts

Laces may be removed for separate hand cleaning. The shoe should not be soaked while the laces are cleaned. This guide does not list replacement-lace dimensions or offer a spare-parts ordering service; those details require a separate parts source.

Fit and usage questions

There is no published wide-fit designation or guarantee of comfort over a full work shift. Ask for the wearer's intended use only when it would change the available guidance. Do not claim that textile construction alone makes the shoe appropriate for a medical or orthopedic need.
