TrackBloom | Product and care guide

trackbloom-guide | Version 1 | Applies in: DE, FR
Effective 2026-10-09 | English | Fictional training publication
Product: PRODUCT-TRACKBLOOM

Casual-wear classification

TrackBloom is a lifestyle shoe with a synthetic upper and rubber sole. White and sand are catalog colors. Track is part of the name; no athletics-track or spike specification appears in the maintained product record.

Caring for the finish

Wipe dust away with a soft cloth before cleaning marks using water and mild soap. Remove residue with another damp cloth. Avoid bleach, solvent cleaners and abrasive sponges, which are outside this published care method.

Drying and shape retention

Do not machine wash or tumble dry the shoe. Air dry it away from direct heat and store it with the toe and heel free from pressure. Crushing a damp upper in luggage can change its shape; unpack and ventilate it first.

Fit and workplace use

Try both shoes indoors before deciding on fit. This publication contains no slip-resistance or occupational-protection certification. A rubber sole alone is not enough to confirm that the shoe meets a workplace footwear requirement.
