Product: PRODUCT-TRAILECHO

Indoor training classification

TrailEcho is listed as an indoor training shoe. It has a textile upper and rubber sole, with red and black catalog colors. Trail is part of the model name; the current product record does not place this shoe in the trail-running category.

Before entering the studio

Remove outdoor dirt from the sole before using shared exercise floors. Secure the laces so they cannot catch on equipment. Follow the studio's requirements for footwear; the product record does not supply a non-marking or specialist court-use certification.

Cleaning after exercise

Use a soft brush for loose dust and a damp cloth with mild soap for the textile upper. Remove soap residue and let the pair dry in a ventilated room. Do not machine wash, submerge the shoe or dry it on a heater.

Fit and training limits

Try lateral steps indoors to assess whether your foot slips within the shoe. The guide does not assign a safe lifting weight or a sport-specific stability rating. Stop an activity if the shoe is damaged or no longer fits securely.
