Intended use and construction

Velocity Knit is a trail-category shoe with a recycled mesh upper and rubber sole. Use it for recreational outings on maintained unpaved paths. The word Knit is the model name; the material record specifies mesh. Inspect the path and choose a pace that allows secure footing.

Removing mud

Let surface mud dry, then loosen it with a soft brush. Clean the mesh with a damp cloth and a small amount of mild soap. Work around the seam joining the upper and sole without pulling it. Do not machine wash, pressure wash or soak the shoe.

Drying after an outing

Loosen the laces and open the tongue to allow air into the shoe. Dry at room temperature in a ventilated place. Replace damp packing paper rather than putting the shoe on a radiator. Brush stones out of the sole before the next use.

Fit and surface limits

Try both shoes with the socks intended for walking and check for forward sliding on a gentle indoor incline. EU sizing does not specify foot width. No waterproof membrane, ice-traction rating or technical mountaineering use is specified for this model.
