ZenithRun | Product and care guide

zenithrun-guide | Version 1 | Applies in: DE, FR
Effective 2026-10-09 | English | Fictional training publication
Product: PRODUCT-ZENITHRUN

Trail model

ZenithRun belongs to the trail collection and has a recycled mesh upper and rubber sole. Black and green are its catalog colors. The guide covers care for recreational unpaved-path use and contains no altitude or mountaineering specification.

After dusty paths

Brush dry dust off the sole before touching the upper. Clean the mesh gently with a damp cloth and mild soap, then wipe away residue. Do not pressure wash, machine wash or submerge the shoe to speed up cleaning.

Managing moisture

Loosen the laces and allow the interior to dry naturally after damp conditions. Avoid radiators and direct heat. No waterproof membrane or water-resistance test is published, so wet-weather protection cannot be inferred from the trail category.

Inspection and fit

Remove trapped stones and check for a separating sole before the next outing. Try both shoes with the intended socks and check for sliding indoors. EU sizing identifies the model size but does not supply a measured foot-width recommendation.
